

# obesity is a **women's health issue**

leading health experts recognize that **obesity is a chronic, treatable disease that impacts women's health**

Obesity affects **1 in 3 American women.**<sup>1</sup>

Obesity is more likely to affect women of color, impacting:

57% of **Black women**<sup>2</sup>

44% of **Hispanic women**<sup>2</sup>

**obesity has a significant impact on women's health across every stage of life**

Obesity is associated with **over 200 other health complications**,<sup>3</sup> including:

- Diabetes<sup>4</sup>
- Cardiovascular disease<sup>5</sup>
- Breast, ovarian and endometrial cancers<sup>6</sup>
- Anxiety, depression and other mental health issues<sup>7</sup>
- Polycystic ovary syndrome (PCOS)<sup>8</sup>
- Fertility and maternal health challenges<sup>8</sup>
- More severe menopause symptoms<sup>9</sup>

Nearly **25% of women** in the US who become pregnant have obesity.<sup>10</sup>

**70% of perimenopausal women** have overweight or obesity.<sup>11</sup>

**women with obesity are also more likely to face harmful social stigma and discrimination**

At work, women affected by obesity **earn less money** than their colleagues.<sup>12</sup>

Women with obesity are **less likely to get promoted** at work.<sup>13</sup>

**69% of women with obesity** face bias from healthcare providers.<sup>14</sup>

**comprehensive obesity care is an important part of women's health**

Comprehensive obesity care includes:

- ✓ Counseling or intensive behavioral therapy
- ✓ Behavior modification and physical activity
- ✓ Anti-obesity medications
- ✓ Weight loss surgeries
- ✓ Nutrition or dietician services

Nearly **3 in 4 women** using lifestyle modifications are not able to lose weight and keep it off.<sup>15</sup>

## a misunderstanding of obesity has kept care out of reach for many women

A lack of recognition that obesity is a chronic, treatable disease with serious consequences for women's health has created health insurance barriers that limit women's ability to receive the full range of evidence-based obesity care options, particularly medications.

**Less than half** of employers currently cover or are considering covering the latest generation of anti-obesity medications.<sup>16</sup>

Medicare currently **does not cover** anti-obesity medications.<sup>17</sup>

**Only 16 state Medicaid programs** cover anti-obesity or weight-loss medications: CA, CT, DE, HI, KS, LA, MI, MN, MS, NH, PA, RI, SC, TX, VA and WI.<sup>18</sup>

## everybody deserves coverage for obesity care—it's only fair

Obesity is a chronic disease and comprehensive care should be covered to help people lose excess weight and reduce the potential risk of other chronic diseases. **Let's work together to improve access to obesity care for all.**
